Derwent Abstract: (SU1264949A) Treatment involves using a mixt. contg. 9-9.5% oxygen and 91-90.5% nitrogen for 3-5 mins. The treatment with the hypoxic mixt. is alternated with inhaling of atmospheric air for 3-5 mins. 4-12 cycles are carried out in one day. As previously, the treatment involves using a hypoxic mixt. under norbaric conditions. **USE/Advantage** - Reduced side effects during method of increasing nonspecific resistance or organisms in medical practice, esp. in obstetrics and gynaecology. In an example, tests were carried out on gps. of rabbits in the 30th day of pregnancy treated by previous method, proposed method (using alternating treatment), and control method (viz. no treatment) respectively to give results for acute hypoxia: cessation of respiration 4.65+/-0.09, 5.8+/-0.53 and 3.8+/-0.40 mins; cardiac arrest (by ECG) 40.2+/-0.33, 49+0.88 and 28.6+/-0.72 mins. Bul.39/23.10.86.
